

# RenewAgra Technical Solution Design Exemplar

---

THE FUTURE OF CROPS

# Where are we?

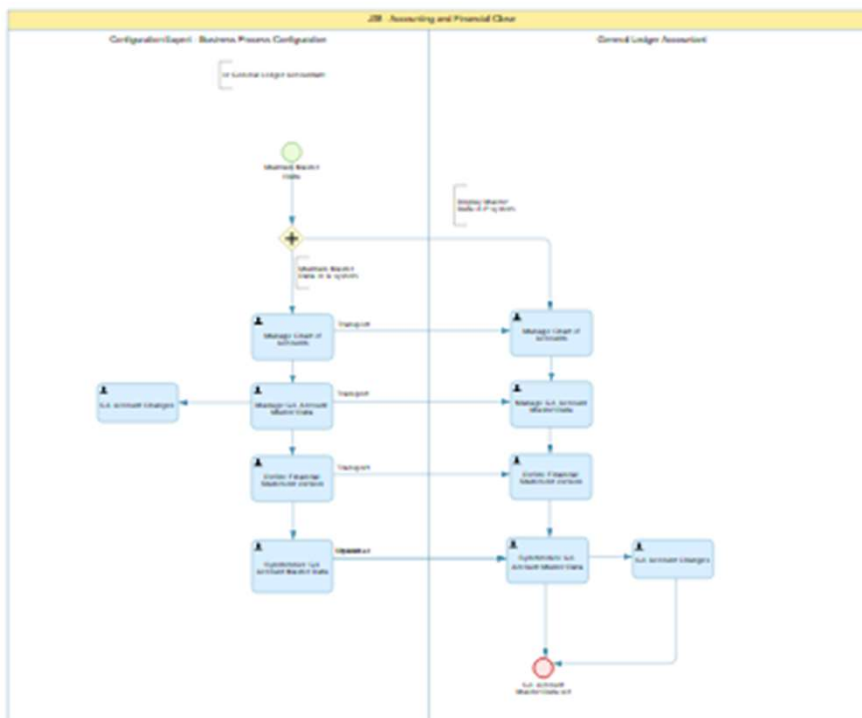

---

# How does fit-to-standard work?

- Every customer goes through a series of fit-to-standard workshops to create a backlog for adjusting the out-of-the-box standards.
- Matching business process to the SAP standard processes optimizes the solution configuration for the customer's requirements and the planned value is optimized.
- Workshops are organized around the functional areas of solution, best practices are presented and business requirements are identified, discussed and added to the backlog.
- Fit-to-Standard analysis uses an iterative approach to assure that integrated dependencies are addressed, and the results are used as input for configuring the solution.
- SAP Tools for Fit-to-Standard: Value Accelerators, SAP Signavio Manager, workspace and SAP Process Collaboration Hub

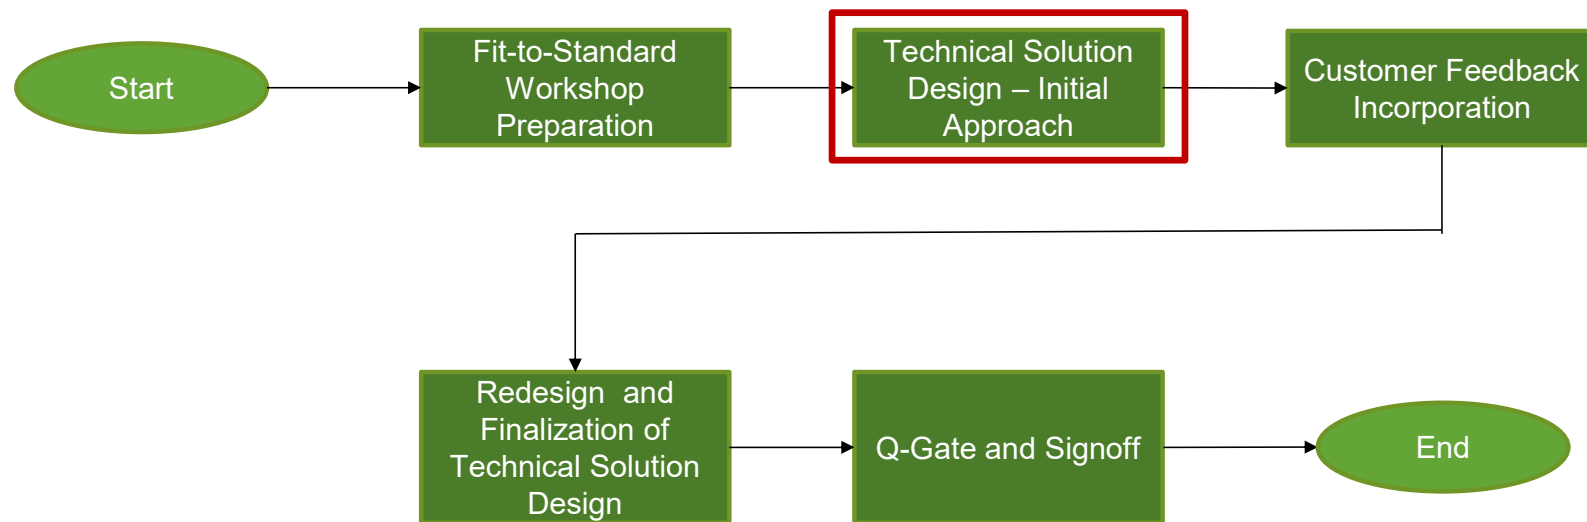

# Example of a standard functionality

**General ledger accounting serves as a complete record of all business transactions, providing a centralized, current reference for the rendering of accounts.**

# Where are we?

---

# What will we do? CropCo

---

**Leverage EnvoData's outputs for operational planning and execution.**

## **For Farmers**

- Forecast yields, give notice for irrigation and provide extreme weather notifications

## **For Crop Planners**

- Optimize machinery usage by effectively using data to maintain and optimize machinery.

# What will we do? TransCorp

---

**Optimize logistics and financial tracking with EnvoData's advanced forecasts.**

## **Fleet Calendar**

Availability, Predictive Maintenance, Carbon Footprint

## **Shipments Planner**

Real-Time Monitoring of Land & Sea Transport with Re-Routing Capability

## **Farmer Bookkeeper**

Commodities Tracker information, Market Needs Forecast, Achieved Revenue Reports, Revenue Forecast by Expected Yields

# What will we do? EnvoData

---

**Become the Central Hub for Advanced Agricultural Intelligence.**

## **Business Solution**

- EnvoData will provide all advanced capabilities, leveraging their systems. TransCorp and CropCo will be service Customers.

## **Technical Solution**

- Replace SAP BW on Hana @ EOL with **SAP BW/4HANA**
- **SAP HANA Smart Data Quality (SDQ)** with **SAP HANA Intelligence Cloud**
- **SAP Sustainability Footprint Managent** with **Green Ledger**

# How ready are we?

---

## **Business Solution**

EnvoData will provide all advanced capabilities, leveraging their systems. TransCorp and CropCo will be service Customers.

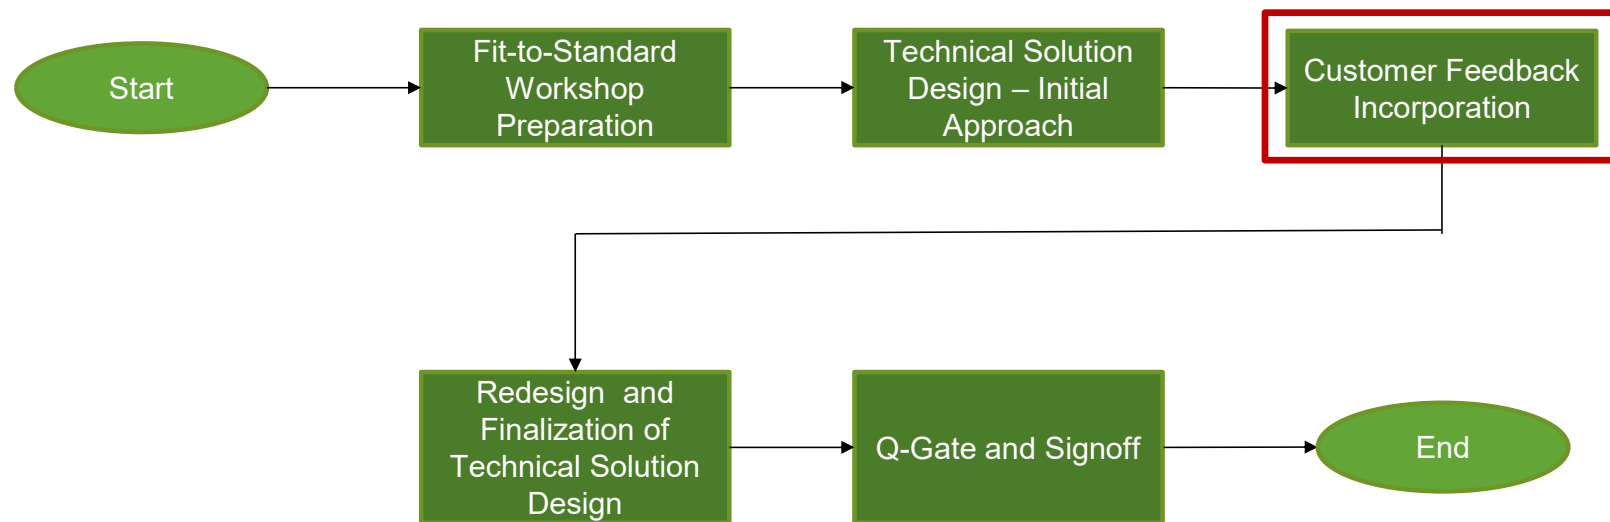

**EnvoData** – Moderate to High Up-to-Date backbone with some gaps.

**Cropco** – Moderate, dependent on ease of consumption from EnvoData

**TransCorp** – Moderate but motivated because systems are antiquated.

# Where are we?

---

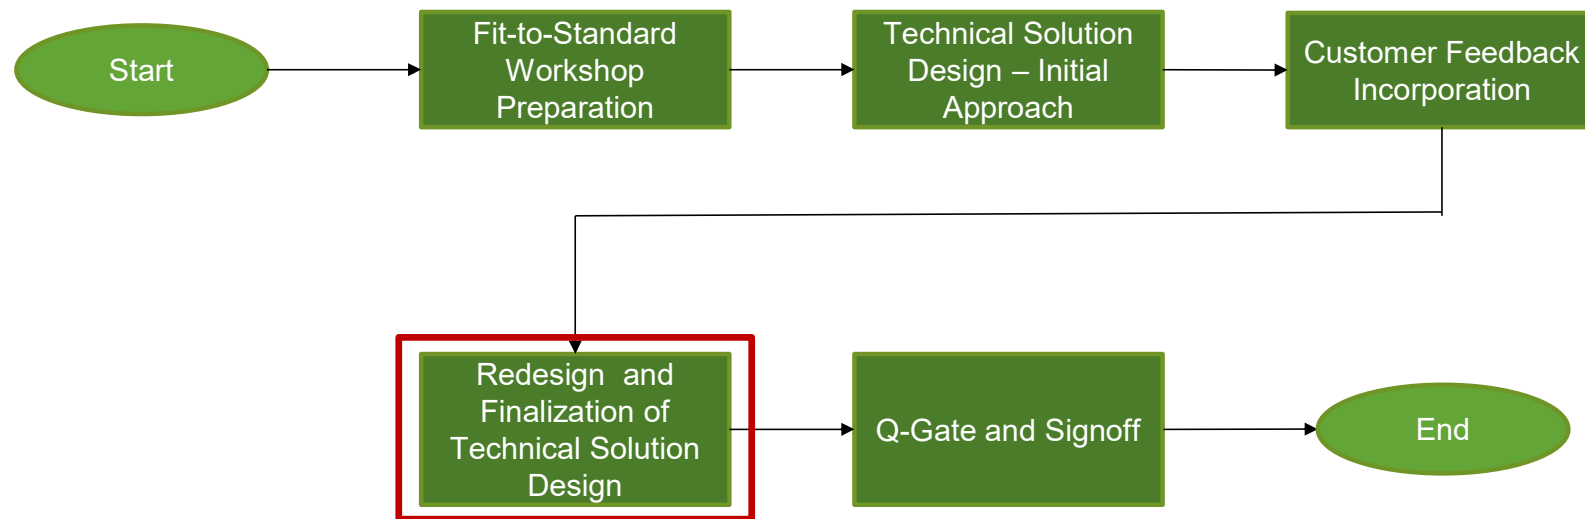

# Addressing customer feedback

	Customer Feedback	Resolution
	Mobile apps for farmers	Blackberry devices limit farmer app adoption; prioritize <b>offline-capable iOS/Android apps</b> (requiring mobile dev skills). Web access is a potential fallback for Blackberry users, but won't offer full functionality.
	Carbon footprint measurements	Due to timeline/scope, carbon footprint is removed from this project. SAP offers a solution that can be revisited later.
	Fleet tracking – GPS	Good feedback and clarity, fleet tracking will be scheduled for full real time fleet tracking capability in 6 months.
	Data protection regulations	Given multi-region data and German systems, data protection discussions are critical. The project scope must address security, data privacy, and governance. Legal/privacy experts are needed.
	Analytical tools	No immediate delay. Phased EOL transition is excellent time to add BTP because some change is expected and additional functionality/benefits will aid in adoption.
	Project tools	Up to date tools and existing skills will accelerate project.

# Where are we?

---

# What will we do? CropCo

---

## Become the Central Hub for Advanced Agricultural Intelligence.

### Business Solution

- EnvoData will provide all advanced capabilities, leveraging their systems. TransCorp and CropCo will be service Customers.

### Technical Solution

- Replace SAP BW on Hana @ EOL with **SAP BW/4HANA**
- **SAP HANA Smart Data Quality (SDQ)** with **SAP HANA Intelligence Cloud**
- ~~SAP Sustainability Footprint Management~~ with ~~Green Ledger~~ **(LATER PROJECT)**

# What will we do? TransCorp

---

**Optimize logistics and financial tracking with EnvoData's advanced forecasts.**

## **Fleet Calendar**

Availability, Predictive Maintenance, Carbon Footprint

## **Shipments Planner (Phased Implementation-SIX(6) Month delivery**

**Real-Time Monitoring of Land & Sea Transport with Re-Routing Capability**

## **Farmer Bookkeeper**

Commodities Tracker information, Market Needs Forecast, Achieved Revenue Reports, Revenue Forecast by Expected Yields

# What will we do? EnvovData

---

## Become the Central Hub for Advanced Agricultural Intelligence.

### Business Solution

- EnvovData will provide all advanced capabilities, leveraging their systems. TransCorp and CropCo will be service Customers.

### Technical Solution

- Replace SAP BW on Hana @ EOL with **SAP BW/4HANA**
- **SAP HANA Smart Data Quality (SDQ)** with **SAP HANA Intelligence Cloud**
- ~~SAP Sustainability Footprint Managent~~ with **Green Ledger** (Later Project)

# RenewAgra – How ready are we?

---

## Business Solution

EnvoData will provide all advanced capabilities, leveraging their systems. TransCorp and CropCo will be service Customers.

**EnvoData** – Moderate to High Up-to-Date backbone Ready for Phased Transition

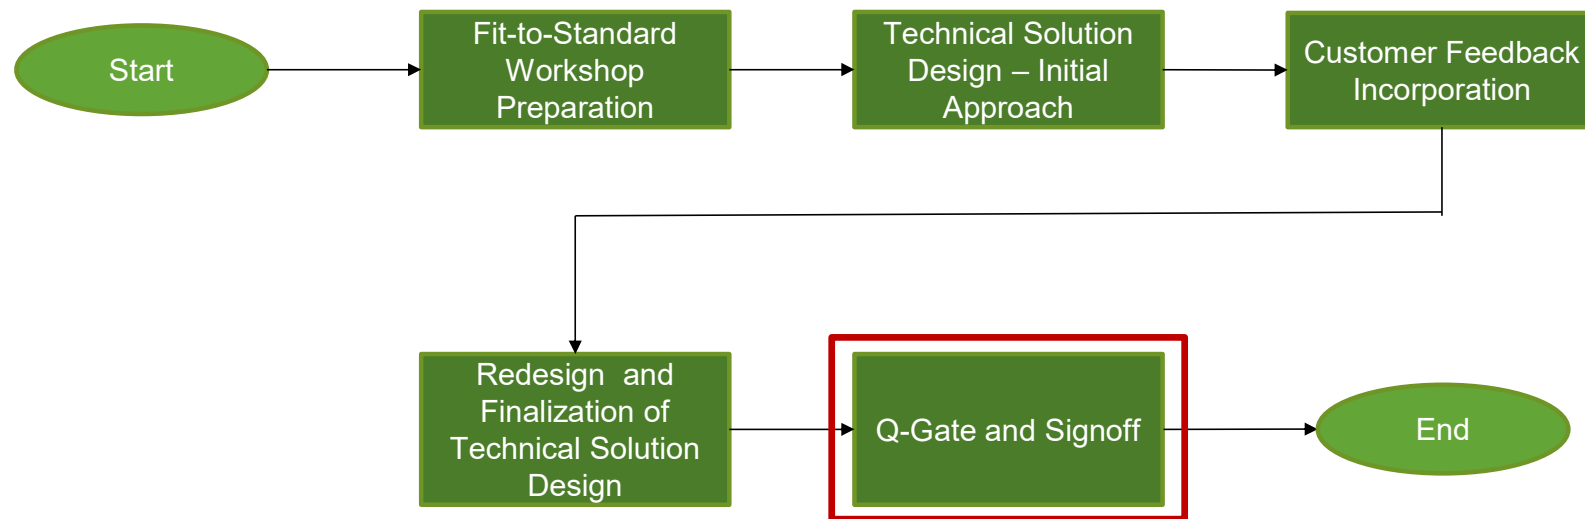

**Cropco** – Moderate, dependent on ease of consumption from EnvoData. Much clearer understanding of specific adoption challenges. Removing carbon footprint simplifies immediate project focus.

**TransCorp** – Moderate but motivated because systems are antiquated. Removing carbon footprint simplifies focus and frees up schedule for GPS tracking in Six(6) months.

# Where are we?

---

# RenewAgra – Product Backlog

---

Develop Mobile App for a farmer bookkeeper

Build the app, write test scripts and create end user material

# RenewAgra – Q-Gate Checklist

---

## **Project Governance**

- Project Plan with go-live and cut over phase
- customer project team and System Integrator team is in place with sufficient resources

## **Implementation Scope for Realize**

- Fit-to-Standard Workshops executed and documented
- Relevant End-to-End Business Processes have been defined
- Relevant countries have been identified
- All SAP Integration scenarios are identified with pre-requisites clarified and fulfilled to integrate

## **Readiness for Realization and Additional Planning Aspects**

- Provisioning of the Development system has been triggered by SAP for Me
- Configuration of the Automated Test Tool is planned
- Availability of business resources is ensured during the realize phase for the next set of activities planned for the subsequent sprints

# RenewAgra – Lessons Learned

---

## **What went wrong? Did we ask enough questions?**

- Insufficient Detail on Mobile Infrastructure. Led to late clarification for offline requirements and the blackberry issue.
- Carbon Footprint Priority was Assumed: should have confirmed immediate strategic priorities.

What went well? Has there been a good alignment of our solution with customer requirements?

- Understanding that S/4HANA is the core for solutions (Yes)
- ALM Maturity: ready to “get it on” (Yes)

Which approach was effective and did not need substantial changes?

- EnvoData as “Central Hub” and utilizing the SAP HANA Capabilities

What should have been done better?

- More comprehensive initial discovery for network communications & customer priorities.

# Where are we?
